Reasons for Allowance

Claims 37-48 are allowed. The following is the examiner's statement of reasons for allowance: The prior art does not disclose or adequately teach the apparatus and corresponding process for the pyrolysis of feedstock as instantly claimed. In particular, the apparatus and corresponding process relies primarily on the indirect heating of the feedstock through the reactor wall of a reactor tube to a temperature for pyrolysis, the indirect heat being supplied externally by the heat of combustion and/or equivalent heating means. In contrast, the prior art teaches direct heating of the feedstock, the direct heating being supplied internally by the heat of combustion. Additionally, the structure of the claimed apparatus differs from the prior art because the structural configuration of the apparatus forces the gasses of pyrolysis generated within the reactor tube to flow upwards solely through the reactor tube (i.e., as caused by the pressure generated within the pressure vessel), thereby allowing the incoming feedstock to act as a filter for the upward flowing pyrolysis gases.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
